DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 9, 14, and 19 are allowed.
2. Claim 1 is allowable because the prior art of record does not teach or suggest a reproducing track-number limiting section with these features. Specifically, the prior art does not teach or suggest said section, which automatically changes a predetermined track from the mute OFF (playback) state to the mute ON (muted) state when said section increases the number of tracks set to a recording ON state and the number of reproducible decreases below the number of tracks set to the mute OFF state, wherein said section inhibits the mute track-setting section from setting more that said reproducible number of tracks to the mute OFF state.
3. Claim 9 is allowable for similar reasons as claim 1. The prior art of record does not teach or suggest a reproducing track-number limiting section with these features.
4. Claim 14 is allowable for the same reason as claim 1. The prior art of record does not teach or suggest a reproducing track-number limiting section with these features.
5. Claim 19 is allowable because it depends on allowable claim 1.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Stadius, John R., US 4,635,288 A, teaches operator selected muting of channels to allow solo review, locking/unlocking abilities, and patch storage and recall (abstract, column 3, lines 17-61, and column 4, lines 4-27);

Silfvast, Scott W., US 6,728,382 B1, teaches a console system, wherein channels can only be assigned to functions to which they are allocated. The system does not allow functions to be assigned to unallocated channels, but there is no mention of automatic assignment (column 4, lines 27-33, column 7, lines 7-15, lines 40-63 and column 11, lines 37-52); and

Ajajian, Edward Y., US 6,870,936 B1, teaches a matrix for routing inputs to outputs (figures 7 and 8).
